### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with James J. Bindseil on 24 August 2004.

The application has been amended as follows:  
claims 53-56 and 60-62 have been cancelled.

2. The following is an examiner's statement of reasons for allowance.

The invention of claim 34 is directed to a part for a motor vehicle which is adapted to house and transport fuel. The part comprises a rubber portion and a polytetrafluoroethylene coating directly bonded to the surface of the rubber between the rubber and the fuel. The coating has a thickness of around a few tens of microns and reduces the transmission of hydrocarbons through the coating portion of the part to not more than 2 g/24 hours.

The invention of claim 38 is directed to part for a motor vehicle which is adapted to contact fuel comprising a plastic or rubber portion and a polytetrafluoroethylene coating bonded to the surface of the portion between the portion and the fuel. The coating has a thickness of around a few tens of microns and reduces the transmission of hydrocarbons through the coating portion of the part to not more than 2 g/24 hours. The portion is either an O-ring or valve membrane.

The inventions of claims 44, 45, and 47 are directed to methods comprising depositing a polytetrafluoroethylene coating having a thickness of around a few tens of microns onto a rubber or plastic portion, wherein the coating is sufficient to reduce the transmission of hydrocarbons through the coating portion of the part to not more than 2 g/24 hours.

Martucci represents the closest prior art. however, Martucci does not teach or fairly suggest a part comprising a polytetrafluoroethylene coating directly bonded to a rubber portion that also has a thickness of around a few tens of microns and is sufficient to reduce the transmission of hydrocarbons through the coating portion of the part to not more than 2 g/24 hours. Martucci also does not teach or fairly suggest an article that is an O-ring or valve membrane. Nor does Martucci teach or fairly suggest a method of forming the part by applying the polytetrafluoroethylene as a coating onto a plastic part. Rather, Martucci forms a polytetrafluoroethylene tube and then coats the tube with a polyamide composition.

Claims 53-56 and 60 were cancelled by Examiner's amendment for at least the reason that the limiting the thickness to "10 to less than 25 microns" would represent new matter that was not supported by the originally filed disclosure. Claims 61 and 62 were cancelled by Examiner's amendment for at least the reason that they did not contain the limitations recited above that made claim 34 allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
